

**Thursday: Methods and measurement techniques**

<b>Time</b> 16:00 - 18:00	<b>Type:</b> Postersession	<b>Abstract</b>
<b>Author</b>	<b>Title</b>	<b>Page#</b>
Green, J.R., Pahn, L. et.al.	A real-time articulatory controlled vowel synthesizer for research on speech motor learning	46
Finan, D.S., Boliek, C. et al.	Respiratory Control: Responses to Dynamic Mechanical Loading During Vocalization in Children	47
Hu, F.	A PARAFAC modeling of lingual articulation in vowel production in Ningbo Chinese	48
Mefferd, A., Green, J.R.	Formant Pattern Predictability Based on Lingual Kinematics	49
Furquim de Andrade, C.D., Chiarion Sassi, F.	Surface electromyography and comfort: the influence of the equipment in muscle activity during speech	50
Feng, Y., Max, L. et al.	Accuracy of a camera-based motion tracking system for orofacial speech and nonspeech movements	51
Flowers, H., Bressmann, T. et al.	Dynamic three-dimensional image rendering of surface tongue movement using multiplanar paced sonography	52
Ito, T., Tiede, M. et al.	A novel technique for triggering mechanical perturbations based on formant trajectories	53
Mandelbaum Gonçalves Bianchini, E., Furquim de Andrade, C.R.	Mandibular movements in speech: electrognathography in temporomandibular disorders and asymptomatic individuals	54
Zharkova, N., Hewlett, N.	Studying coarticulation resistance with ultrasound	55
